

Introduction

`simplevis` is a package of `ggplot2` wrapper functions that aims to make beautiful `ggplot2` visualisation

This blog will provide an overview of:

- the visualisation family types that `simplevis` currently supports
- how visualisation families support combinations of colouring (by a variable), facetting. both or neither

```
library(simplevis)
library(dplyr)
library(palmerpenguins)
```

Visualisation family types

bar

```
plot_data <- storms %>%
  group_by(year) %>%
  summarise(wind = mean(wind))

gg_bar(plot_data, year, wind)
```
